# ETF Mystic Mover

The trackless wire guided smart system can be utilized for permanent or temporary indoor family fun rides. Just plug and play...

The Mystic Mover is the smart smaller member of the ETF Multi Mover family.

- The ride control system of the Mystic Mover has been simplified to plug and play level.

The Mystic Mover can be used for the same application as the larger full-feature Multi Mover although they do differ significantly!

The Mystic Mover in its simplest form can be considered purely as a trackless passenger transport system. By adding a set of simple bar code instructions the Mystic Mover can be transformed into a family fun ride. On-board sound and interactivity with scenes can be supplied produced by means of (for example) a laser target system.

- The Mystic Mover is available as a single or double bench vehicle with a capacity of 2 or 4 passengers!
- The design of the Mystic Mover is simpler. The chassis movement and seat decoration are identical. Fancy movements such as 90° to 360° on-the-spot rotation, or left or right movement at a fork still can be made by moving the entire vehicle.
- The Mystic Mover runs forward only. For reverse movements the entire vehicle will make a turn.

The Mystic Mover is supplied with standard decoration which can be customised as an option. Seat restraint systems in the form of a belt or bar are also optional.

## ETF Mystic Mover
