ETF Event People Mover

The ETF Event People Mover is a ride for indoor and outdoor use in all locations where large crowds gather and where people have to be moved from one location to the other.

This ride is most suitable as a truck-hauled transportation system for use during large events, for factory visits, leisure parks, holiday parks, shopping centres etc.

The Event People Mover designed by ETF Ride Systems has an attractive design and a solid construction. It can handle a maximum of 24 persons, or it can be fitted with a special platform to handle 23 persons plus 2 people with wheelchairs or strollers.

The Event People Mover concept has been designed with a high degree of vandalism safeness.

The Event People Mover is of a flexible design, allowing easy adaptation to specific requirements.

The Event People Mover is provided with a brake system to allow for limited uphill and downhill rides. The front and the rear axles of the Event People Mover(s) accurately follow the manoeuvres of the truck to ensure optimum comfort.

The same truck can haul several Event People Movers, increasing the capacity of the train.
