ETF Specials

In addition to its "standard" rides, ETF Ride Systems also offers the capability, together with the other partners within the ETF group, to develop and build custom-designed, "special" rides.

We welcome the opportunity to apply our expertise in developing, engineering and building special amusement rides and products based on concepts which have not originated from ETF Ride Systems.

Our experience and knowledge lies in the field of combining mechanical drive systems and electric/electronic systems – a so-called "mechatronic" combination.

Our company has a strong, experienced mechanical and electronic engineering department, supported by our own R&D team. We also have a special team for creating special decorations.

Our range embraces low to medium speed vehicles, and together with the adapted tracks and control systems, they constitute your "special".

As we have all necessary skills in-house, easy communication with our customers is possible which can result in short development times.

Please feel free to tell us about your ideas, expectations or requirements so we can come up with a design!
