

# Reliable material slitting

The ETF crush slitter is ideal for continuous cutting applications. The cutting blade is pneumatically pushed to a hardened, driven shaft. The material running in between will be split by crushing it. Due to the metal on metal contact of blade and shaft the edges of the blade do not have to be sharp which guarantees a long lifetime of the blade.

## FEATURES & OPTIONS

- Pneumatic positioning in and out of the cutting position
- Slitting to small widths possible
- Manual or motor driven width adjustment
- Long lifetime blades
