

Customised specials

All ETF machine concepts that are developed for floorcoverings can be applied to different areas. Our imaginative engineering department is excellent at translating your specific requirements into a unique design of a made to measure machine. Everything is possible.

For more than 70 years of manufacturing machines we have built a special designed machine for application in another industry on numerous occasions. Even specials like a pick and place unit and polystyrene forming unit. The processes in floorcovering production are not unique. We are able to translate them into different areas. The examples below illustrate this.

imaginative engineering

M 6430

Vinyl sawing

The ETF vinyl sawing machine is perfect for cutting 4 meter rolls into e.g. 2+2 meter width rolls or 3+1 meter. The sawing position is supplied with a rolling unit which contributes to fast cycle times.

M 6430 and M 9630

M 9630

Lead slitting & rolling

ETF developed a machine for slitting, cross cutting and rolling of lead, both with or without a tube. This machine is a complete finishing system when delivered with tape dispensers for securing the roll, an on-line weighing and labelling system and an automatic palletising system.
