

Multi Mover

The ETF Multi Mover is a trackless ride suitable for permanent and temporary installation. It transports visitors comfortably in attractions such as dark rides and animated attractions. The Multi Mover is also an excellent vehicle to use as a visitor tour system in factories, exhibitions and museums.

Create a multimedia ride experience

The Multi Mover can accommodate special seating or themed arrangements according to your requirements. Vehicle speed, unlimited rotations of the body and reverse movements can be set in the design phase and altered any time. The vehicles are designed to carry either 4 or 6 passengers on two bench seats. Since all intelligence is in the vehicle and no mechanical track is required, the operation costs are reduced to a minimum in comparison with similar track bound rides.

The use of a guide wire circuit offers the possibility for revolutionary new ride concepts like crossings at the same level, switches, junctions, driving into and out of dead-end tracks ('Y-shapes'). The Multi Mover has an on-board multiple channel sound system for multi-language operation. Also special effects such as air blast moments and seat vibration are possible, just as target shooting systems or similar competitive features. An optional two-way communication system allows visitors to interact with animated exhibits or 2D/3D media presentations. Of course the ride control system can easily be interfaced with the show control of the ride.

FEATURES & OPTIONS

- | | |
|-------------------------------------|-------------------------|
| • Typical vehicle guidance distance | 150 - 350 m |
| • Track type | no track - wire guided |
| • Application | indoor |
| • Typical no. of vehicles | 8 - 40 |
| • Vehicle capacity | 4 - 6 people |
| • Ride capacity per hour | 960 - 1,440 people |
| • Maximum speed | 1.2 m/s |
| • Minimum horizontal curve | 1.6 m |
| • Power system | on-board battery-system |
| • Operation time max. | 14 hours/day |
